|                                                                                                                                                                                                                            | Page |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>Preface</b> .....                                                                                                                                                                                                       | i    |
| <b>Research Reports</b>                                                                                                                                                                                                    |      |
| Further data on the genes controlling anthocyanin pigmentation in the pea.<br>V.S. Bogdanova, Y.A. Trusov and O.E. Kosterin.....                                                                                           | 1    |
| Inheritance of a pollen protein and a probable case of inversion in the pea chromosome<br>corresponding to linkage group I.<br>O.E. Kosterin, V.S. Bogdanova, F.L. Gorel' and V.A. Berdnikov.....                          | 5    |
| Studies on colchicine induced tetraploids of the pea.<br>A.Y. Kravchenko.....                                                                                                                                              | 9    |
| <i>Enod2</i> exhibits linkage with <i>a</i> (linkage group IA) and <i>Fum</i> (linkage group II).<br>V.G. Paruvangada, N.F. Weeden, T. Cargnoni, J. Yu, F. Gorel', T. Frew,<br>G.M. Timmerman-Vaughan and J. McCallum..... | 12   |
| Identification of a high copy number, retrotransposon-like sequence: results from an<br>unsuccessful PCR search for a pea homologue of the p53 tumour suppressor gene.<br>V.B. Sarup and J.P. Stafstrom.....               | 14   |
| Multiple resistance to PSbMV and BYMV and tolerance against PEMV found in<br>segregants selected for <i>sbm-1</i> .<br>H.E. Schmidt, H. Jaiser, P. Matthews, M. Ambrose, I. Stühler and<br>W. Odenbach.....                | 20   |
| Mapping of <i>nod-4</i> , a new hypernodulating mutant in pea.<br>K.K. Sidorova and L.P. Uzhintseva.....                                                                                                                   | 21   |
| Linkage of gene <i>chi-33</i> on linkage group VI.<br>W.K. Swiecicki and K. Kruska.....                                                                                                                                    | 22   |
| Chromosomes 2 and 6 are involved in the Twt-translocation.<br>S.V. Temnykh, F.L. Gorel', V.A. Berdnikov and N.F. Weeden.....                                                                                               | 23   |
| <i>Sym2</i> and <i>nod-3</i> are independent but closely linked genes influencing nodule development<br>in pea.<br>S.V. Temnykh, N.F. Weeden and T.A. LaRue.....                                                           | 26   |
| <b>Germplasm</b>                                                                                                                                                                                                           |      |
| Offer of seed from the Earl Gritton Pea Improvement Program at Madison.....                                                                                                                                                | 29   |
| <b>Letter to the Editor</b>                                                                                                                                                                                                |      |
| Evaluation of linkage in F <sub>2</sub> progenies by the chi-square criterion with codominant<br>genes involved.<br>O.E. Kosterin.....                                                                                     | 31   |
